Problems:

Different pilots, same aircraft ⇒ different rating

Ground based simulation
Real aircraft in flight test } (very) different rating

Fixed base simulation rating

↓

Cooper-Harper rating transformation

↓

Equivalent flight test rating

Possible? A current open question for research!

Cooper-Harper rating

Turning subjective (pilot) rating into numbers (for engineers)

	Pilot rating	Aircraft characteristic	Demand on pilot
Good	1	Excellent	Pilot compensation not a factor for desired performance
	2	Good, small defects	—"—
	3	Fair, some mildly unpleasant characteristics	Minimal pilot compensation needed
Improvement recommended	4	Minor but annoying deficiencies	Moderate pilot compensation needed
	5	Moderately objectionable characteristics	Adequate performance requires considerable pilot input
	6	Very objectionable but tolerable characteristics	extensive pilot input needed
Improvement required	7	Major deficiencies	Adequate performance cannot be obtained with maximum tolerable pilot input
	8	—"—	Considerable pilot input needed to maintain control
	9	—"—	Intense pilot input needed to maintain control
Well?	10	—"—	Control will be lost
